

The Software Solution Suite is a collection of multiple easy to use applications, which will help any company to optimize different processes throughout their entire organization.

All of our solutions are divided into five unique categories which will tell you exactly the kind of service the software provides.

Create **Input** **Process** **Analyse** **Store**

3s.DAP solution

Automate the drafting of your legal documents

3s.DAP is a Document Automation Platform that can be used to create structured corporate documents in a safe way. It is a platform designed by lawyers for legal professionals and businesses, so you can be sure that your documents are secure.

When logging in to 3s.DAP, you will access to your personal workspace, where you can create your own dynamic document templates in a few clicks, or access the ready-to-use template library. Your internal or external clients can then generate documents in minutes by answering simple online forms. So through smart questionnaires, the solution even automatically populates documents for you.

There are two versions of 3s.DAP. One is for free and can be used to generate one standard template. The second one is our subscription model. It contains three templates, one of which is customized. And of course you have the option to add more templates.

Dynamic models

Transform your word templates into dynamic models. Create your legal documents in minutes.

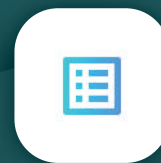

Workflow

Set your models access rights and work together with your team within a shared workspace.

Clause library

Save time by finding and reusing your favorite clauses and templates.

Dashboard

Keep an eye on your organization's key legal information: number of contracts, status, history, KPIs, etc.

The journey of your documents

How important are your company documents, pictures and all the other files for the business? Exactly, they are essential. That is why we, Spigraph, came up with the different steps your company needs to take to make business processes easier, more efficient and safer. Welcome to 3s., our Solution Software Suite.

Create

Make something you are proud of. And let us help you where we can. All the products in our 'Create' category give you the tools to produce whatever you and your company need.

Input

We want to make scanning as easy as possible for you. Therefore, we have the best scanners available, but we also have great software to cater to all your scanning needs. You'll find those products in our 'Input' category.

Process

Make your working life easier. All of our solutions in the 'Process' category help you to improve performance, increase efficiency of document processes and enhance the value of your capture solution.

Analyse

Do you know all the content located on all the systems in your organization? Our solutions do. The products in our 'Analyse' category will help you find, organise, classify and manage content located in systems and repositories across your entire organization.

Store

And last but not least: you can create whatever you want, but you also need a place to store all that great content. The solutions in our 'Store' category offer you just that. Nothing more, nothing less.

Solution Software Suite by Spigraph

Spigraph is one of the leading providers of document capture and processing solutions. In addition to its portfolio of document scanners from the world's leading manufacturers, Spigraph supports its customers in automating business processes and generating operational efficiencies through digital transformation.
